OVERVIEW OF THE COUNTRY’S BUSINESS AND HUMAN RIGHTS LANDSCAPE

Background

Lao PDR is among the Least Developed Countries (LDC) in the world, ranking 138 of 187 countries, according to the UNDP’s Global Human Development Index (HDI) of 2011. It is a land-locked country, sharing its borders with five countries. Its population of 6.25 million people is divided into 49 ethnic groups. About 67% of its population is Buddhist. In 1975, the previous monarchy ended and Laos became a socialist regime. It started to accept foreign investment and establishment of private enterprise in 1988, and Laos became a member of ASEAN in 1997. Currently Laos is ruled by the Lao People's Revolutionary Party (LPRP), the country’s only political party. The State Party is directed by a Politburo of 11 men, and a Central Committee of 53 members.

Domestic and International Legal Framework

Laos adopted its Constitution in 1991 and amended it in 2003. Laos’ legal system has a civil law system similar in form to that of the French. Laos has adopted legislation covering several key areas of business and human rights such as land, labour and environment. Subordinate legislation such as decrees and ordinances supplement and define the implementation of state legislation. Additionally, customary law, or traditionally unwritten practices that have evolved over time, provides an important basis, especially for Lao’s many ethnic groups.

Lao PDR is a party to six core human rights conventions and two optional protocols: International Covenant on Civil and Political Rights (ICCPR), International Covenant on Economic, Social and Cultural Rights (ICESCR), International Convention on the Elimination of All Forms of Racial Discrimination (ICERD), Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), Convention on the Rights of Persons with Disabilities (CRPD), Convention on the Rights of the Child (CRC) and the latter’s two Optional Protocols regarding the Sale of Children, Child Prostitution and Child Pornography, and the Involvement of Children in Armed Conflict. Laos has also signed the Convention for the Protection of All Persons from Enforced Disappearance. Laos has a dualist legal system, which requires international treaty obligations to be incorporated into domestic law in order to be invoked before domestic courts. In principle, the provisions of these human rights treaties have been largely incorporated into the Lao PDR’s national laws and regulations. In addition, Laos is also a party to eight ILO conventions (Conventions No. 4, 6, 13, 29, 100, 111, 138, 182). The Laos government also received training in UN human rights conventions from international donors, and cooperated with the International Committee of the Red Cross in the implementation of international humanitarian law.

Economy

According to a Bertelsmann Stiftung (BTI) Report Laos has a “distorted market economy marked by weak financial institutions, uneven competition, poor transparency and political interference, and
sapped by pervasive corruption.”

Commercial risk ratings rate Lao as one of the highest risk countries for investment, and the World Bank ranked Lao 163 out of 185 for ease of doing business in 2013. Despite this, foreign direct investment in Lao has increased from US $187 million in 2003 to US$450 million in 2011.

Laos’ growth rate increased from 4.38% in 1998 to 8.041% in 2011. While overall number of people living below the poverty line declined substantially from 33.5% in 2002 to 27.6% in 2008, it is still almost twice as high in rural areas than in urban areas. Especially in the rural areas which account for the largest part of the country. Most households in Lao still depend on subsistence agriculture.

An important development is the structural shift from agriculture to natural resource based industry. While the contribution of agriculture to GDP constantly declined over the last decade, natural resources have been growing very rapidly, resulting in share in GDP almost tripling between 1998 and 2010 with 16% by 2010 compared to 5.9% in 1998.

Backed by the World Bank and ADB, the government is committed to a poverty-reduction program that will raise Lao from Least Developed Country status by 2020. The Laos government is driven by its commitments under the ASEAN Free Trade Agreement and became a member of the WTO on 2 February 2013. Laos opened its first securities exchange in 2011 with a view to attract capital.

Labour

Urbanization is increasing, with the urban population rising from 15.4% to 34% between 1990 and 2011. The ILO estimates that 67,000 workers enter the workforce annually, and Lao will have a workforce of 4 million by 2020. This should place even more demands on employment, and increase the demand for migration with its inherent risk of trafficking. Women comprise the majority of workers in SMEs, but there are few women workers in larger enterprises. The poorly skilled workforce is cited as the third biggest problem of doing business in Laos.

High levels of unexploded ordnance contamination remain a threat to around 25% of villages, which result in approximately 300 injuries and deaths annually, most of them related to farming.

There is a right to organise collectively or form labour unions in Laos, yet all labour unions need to be affiliated with the government sanctioned. All forms of forced labour are prohibited by law. The Lao Government has expressed its intention to ratify the ILO Convention No. 105 on the prohibition of forced labour.

Laos is particularly exposed to trafficking both as a transit and a destination country. Tens of thousands of young people migrate from Laos to Thailand,
typically on a seasonal basis. Although initially many of them are voluntary migrants, a large number of them become victims of trafficking. Many children are also found exploited as child labour in various industries.

Strong demand in Thailand for cheap labour and the need for alternate means of livelihood for rural youth fuels the demand for illegal migrants, who are smuggled across difficult to police borders by middlemen and corrupt officials. The ILO estimates that 200,000 Lao workers are currently in Thailand, mostly low-skilled, generating annual remittances of US$100 million. However, due to the global economic situation, the ILO reports that 2,000 documented migrant workers returned from Thailand to Laos from garment factories that closed.

Environment

Lao PDR is blessed with considerable natural resources, including minerals such as gold, lignite and copper. The country depends on its natural resources for most of its economy. The Lao government has targeted tourism, especially ecotourism, as a major area of future growth. This could potentially lead to concern for maintaining the environment and the country’s natural resources.

Deforestation of the extensive forest cover is a pressing environmental concern. This is reportedly reduced from 70% in 1940. The rich biodiversity of the country is also under threat. Agricultural land is also compromised due to the large areas of land rendered unusable by the presence of cluster munitions and unexploded ordnance.

There is a flourishing trade in illegal timber between Vietnam and Laos. Laos’ law prohibits timber trade, however it continues unabated. Illegal logging threatens Laos’ forest cover as well as the livelihood of 4.2 million of the rural population of Laos who depend on the forests.

Hydropower is one of the primary earners of foreign income for development in Laos. A significant business and human rights concern is the development of hydropower projects in the Mekong river basin. The Mekong River runs through six countries and is home to 65 million people. There are 9 proposed dams in Laos itself, part of a larger proposed development of the entire region. The rural population rely on the wild fish stocks and small subsistence farming is a dominant way of life in many communities that live near the Mekong river. There are concerns that the hydropower projects would impact the food security of the communities living in the area, as well as create negative environmental impacts. The World Bank

43 World Bank, “Environment Monitor.”
has withdrawn its financial support; however, four Thai banks continue to provide funding.\textsuperscript{49} The Xayaburi dam project is the most controversial of these proposed projects.\textsuperscript{50} However, there are problems with many of the other projects as well.\textsuperscript{51}

Other challenges result from insufficient managing of waste and chemicals from plants, leading to problems for both the people situated around the plants as well as reduction in fish stocks.\textsuperscript{52}

**Land**

Approximately 5 million hectares of land in Laos is leased or conceded to domestic or foreign parties, corresponding to 21\% of the land area of the country.\textsuperscript{53} Of these, the largest types of concessions are mining and agricultural investments.\textsuperscript{54}

The granting of land concessions is a major area of concern in Laos. In 2007, the Prime Minister announced a moratorium on further land concessions, in order to review the policies and practices of government agencies in this area.\textsuperscript{55} Figures estimate that 4\% of Laos land has been given away in concessions, in order to attract FDI, improve infrastructure and create employment.\textsuperscript{56} Land concessions are not always granted with attention to comprehensive land surveys and Environmental and Social Impact Assessments.\textsuperscript{57} These concessions may impact villagers adversely, by limiting access to farmland and therewith food security, by loss of income, jeopardizing of cultural and social values, amongst others.\textsuperscript{58} The largest proportion of hotline calls to the National Assembly concerned problems related to livelihoods and poverty reduction, especially related to land concessions.\textsuperscript{59} The NA Deputy Office Head Viseth Savengsuksa said that “while people do not always protest the deals, they ask for fair compensation to be issued quickly.”\textsuperscript{60}

A land titling program has been undertaken in the larger towns, and is being extended to the countryside.\textsuperscript{61} In rural areas, families possess user rights to agricultural land, which can be transferred and are heritable. Communities may also exercise traditional rights to non-agricultural land, including those ethnic minorities who practice shifting slash-and-burn agriculture.

Villagers in rural areas rely on forests for a large portion of their income, and the changing landscape creates several problems. Traditionally wild cardamom grows in mountainous regions of Laos, which provided the rural population with up to one-fifth of their income.\textsuperscript{62} Deforestation caused by rubber monocultures has led to forest loss and

the loss of wild cardamom collection opportunities for villagers. However, it has been argued that the cultivation of cardamom has the potential to enhance rural livelihoods and promote sustainable land use in upland areas of northern Laos.63

Corruption

Although Lao has a robust framework of anti-corruption law, international actors allege that this law isn’t adequately implemented, and in practice, corruption is rampant.64 The UN Office on Drugs and Crime identified three particular reasons for Laos to take measures against corruption: “(1) Misappropriation of public funds, taking of bribes, improper exercise or non-exercise of authority and neglect of official duties will deprive the Lao nation of their assets and opportunities for development; (2) Because Laos is substantially relying on assistance from international cooperation, such deprivation of assets and opportunities simultaneously occurs to the international community as well; (3) Unjust enrichment of corrupt officials and their business partners without any risk of prosecution and deprivation of their property will discourage civil society's aspiration for prosperity through legitimate business activities, or may even destabilize the Government by discrediting its legitimacy and capacity to govern.”65 Laos is currently undergoing the review procedure in the context of the United Nations Convention against Corruption (UNCAC). However, the 2012 BTI report states that as a result of international pressure, partly from its membership of ASEAN, and partly due to Laos’ wish to join the WTO, the government has begun reforms in the economic and financial arena.66

Human Rights

The Constitution provides for equal treatment under the law for all citizens.67 However, in reality ethnic minorities and those living in rural areas are often disadvantaged, due to lack of resources and access to public services.68

All candidates are vetted by the Party before being allowed to participate in the elections and no elections take place at the local level.69 There are no opposition parties, and all media organisations are controlled by the Party.70

Civil society is weak in Laos as no interest groups are allowed to function outside the control of the ruling party.71 In 2009, the government agreed to allow the formation of Lao NGOs, which must apply to the government for registration.72 Estimates state that at the time there were about 100 informal organizations working in areas such as health, education and rural development, and around 80 international NGOs.73 The decision to permit the formation of NGOs may encourage the creation of a stronger civil society in Laos.

Women and Children

Lao is mainly a source country for human trafficking, with Thailand being the most prominent destination country, for both sexual exploitation and labour.74 Trafficking in persons is a problem across the Southeast Asian region, and it is difficult to regulate due to the problems presented by lack of implementing infrastructure, natural boundaries and the lack of employment opportunities in the rural regions.

68 Bertelsmann Stiftung, Laos Country Report, 8.
69 Ibid.
70 Ibid., 9.
72 Decree 115/PM on Associations, April 29, 2009.
Girls receive lower levels of education than boys, and are therefore more vulnerable to trafficking.75 Women also face greater challenges accessing justice due to traditional customary practises, lack of education and awareness and financial constraints.76 CEDAW expressed serious concern at the disadvantaged position of women in rural and remote areas, facing poverty, illiteracy, difficulties in access to health, education and social services, and lack of participation in decision-making.77

Corporate Social Responsibility

The International Law Forum “Corporate Social Responsibility (CSR) in Laos” brought together senior government officials, business representatives, experts and stakeholders in in Vientiane on 12th March 2012 to exchange views and share ideas on the concept of CSR and its relevance to Laos.78 Generally, Lao PDR companies do not participate in initiatives such as the Global Compact (only one Lao NGO is a participant).79 This suggests that the concept of CSR is very new in Lao, but there is growing interest. This forum concluded that the next step for the Lao PDR is to study the possibility of establishing a National CSR Compact, which will assist in CSR work in the country and ensure that public and private sectors take into account CSR as well as environmental and social impact in development projects and investments.80

I. How has the State reacted to the UN “Protect, Respect and Remedy” Framework (“Framework”)?

The Laos Government has not specifically reacted to the UN Framework.

II. Is the State duty to protect against human rights abuses by third parties, including businesses (“State Duty to Protect”), recognized in the country’s domestic legal system?

1. Do any of the State’s domestic laws, including the Constitution / basic law of the State, provide a basis for a State Duty to Protect?

Lao law does not contain any specific reference to business and human rights, nor does it specifically use the language of the UN Framework. However, there is general language that can be interpreted as containing a duty to protect.

A) Constitution of Lao PDR

Lao PDR adopted a Constitution in 1991, which was amended in 2003.81 Article 6 sets out that “the state protects the freedom and democratic rights of the people, which cannot be violated by anyone.”82 Unity and equality among all ethnic groups is also enshrined in the Constitution.83 “All ethnic groups have the right to protect, preserve, and promote the fine customs and cultures of their own tribes and of the nation.” This article is important in the context of development projects, where the cultural practises of ethnic groups may be at risk. Freedom of religion is included in the amendment, and all acts that create a

80 Times Reporters, “CSR vital.”
81 Laos’ first, French-written and monarchical constitution was promulgated in 1947, as part of the French Union. The revised constitution of 1957 omitted reference to the French Union, though close ties persisted with the former colonial power. The 1957 document was abrogated on December 3, 1975, when a communist People’s Republic was proclaimed.
82 Article 6 in 1991 Constitution and maintained in the 2003 amendment.
83 1991 Constitution, Article 8.
division between religious groups are banned. The “conservation of the unique culture and fine tradition of the nation” is also included in the amendment.

Article 19 specifically states that “all organizations and citizens must protect the environment and natural resources: land, underground, forests, fauna, water sources and atmosphere.”

Education for ethnic groups, women, children and those who live in remote areas is a state priority, and the state encourages the private sector to invest in the development of education of the nation. The Constitution also includes a provision explicitly stating the need to “protect the legitimate rights and interests of the workers.” The development and advancement of women, and the protection of mothers and children is another amendment included in the 2003 Constitution.

Article 41 grants access to remedies: “Lao citizens have the right to complaint, file petitions and propose comments to relevant state organizations in connection with issues pertaining to the rights and interests of collectives or of their individuals.”

B) Law on Labour 2006

Labour protections are a fundamental aspect of business and human rights. The Labour Law was enacted in 1994 by the Lao Government, and subsequently amended in 2007. The law requires employers to provide safe working conditions, payment of salary or fair compensation and to implement provision of social security for employees. Forced labour is unlawful. Employees are also allowed to participate as members of lawful mass organisations and social organisations.

Laos labour law purports to develop its workforce through requiring that employees hire local people, needing approval for employing foreign workers. Additionally the law requires that people employed should be able to develop skills as a result of the work, and the skill-building should be consistent with the demands of the market and the development plan of the country. Employers have a direct obligation to train their labour force and build skills, using 1% of the employees’ salary or wages reserve fund to cover expenses.

C) Environmental Protection Law 1997

Article 4 of the Environmental Protection Law states that “[a]ll Lao people, resident aliens, stateless persons and residing foreigners, engaged in any production or service have a responsibility to protect the environment.” According to this law, the duty of the state is restricted to providing relevant information, raising awareness and providing education on the importance of the environment.

Article 5 of this Law sets out the basic principles of protection:

1. Environmental protection shall be the priority consideration, and environmental mitigation and restoration are considered to be less preferable, but also important activities;
2. The national socio-economic development plan shall include provisions to protect the environment and natural resources;
3. All persons and organizations residing in the Lao PDR shall have an obligation to protect the environment;
4. Whoever causes damage to the environment is responsible for the impact under the law;

98 Ibid., Article 10.
100 Ibid.
101 Ibid., Article 5.
5. Natural resources, raw materials and energy shall be used in an economical manner, which minimizes pollution and waste and allows for sustainable development.

Additionally, article 13 of the Law states that “[a]ll persons and organizations have an obligation to protect natural resources. Persons or organisations that witness any event which leads to losses of natural resources, have an obligation to report the event to the responsible agency for timely action and protection.”

Article 18 states that “[a]ll persons and organizations have an obligation to protect and take action against disasters… local authorities shall cooperate in order to determine methods to protect and take action against such disasters, and shall mobilize the population and other organizations to contribute initiative, labour, funds, transport vehicles and other necessary tools to protect and take action against such events in a timely manner.”

In 2005 an Environmental Protection Fund was launched with Prime Minister Decree 146 aiming at strengthening environmental protection, sustainable natural resources management, biodiversity conservation and community development.

D) Land Law 2003

The 2003 Land Law states that “the State protects the legal interests of the holder of land use rights…” The law also states that “[a]ll individuals and organisations shall have the obligation to protect the land to ensure that it is in a good condition in which there is no soil erosion, land subsidence, and soil degradation…”

Article 59 of the Land Law 2003 further states that State, political, mass, economic organisations, or the Lao National Front for National Construction that have the right to use land “only have the rights to protect and use such land and have no right to transfer, lease or grant concessions or to use land as a share contribution or guarantee.”

2. Has the State Duty to Protect been recognized by the State’s courts?

No information available.

III. Is the State taking steps to prevent, investigate, punish and redress business-related human rights abuses through effective policies, legislation, regulations and adjudication?

1. Are there government bodies and/or State agencies that have the responsibility to prevent, investigate, punish and redress business-related human rights abuses? If so, how have they done so?

While there are no specific bodies mandated with business and human rights issues, there are some bodies that look at the wider area of human rights. Lao PDR has inter-agency mechanisms such as the National Steering Committee on the Preparations for the Ratification and Implementation of the International Covenants on Human Rights, and the National Steering Committee on the Preparations for the UPR, the National Steering Committee on reporting under and implementation of the International Convention on the Elimination of All Forms of Racial Discrimination, the National Commission for the Advancement of Women, the National Commission for Mothers and Children, the National Committee for Disabled People, the National Committee for Rural Development and Poverty Alleviation, and the National Committee Against Human Trafficking.

Environmental agencies may also take human rights into consideration. The Environmental Protection Law provides for the following bodies for Environment Management and Monitoring.\footnote{Environmental Protection Law, Article 35.} 

1. The Science, Technology and Environment Agency 
2. Environment Management and Monitoring units at the ministerial level 
3. Environment Management and Monitoring units at the provincial, municipal or special zone level 
4. Environment Management and Monitoring units at the district level 
5. The village administrations 

**Article 36. Rights and duties of the Science, Technology and Environment Agency**

The Science, Technology and Environment Agency (STEA), being the environmental management and monitoring organization at the central level, has the following rights and duties:

1. To act as a secretary to the Government in making and translating environment strategies and policies into plans, detailed projects and relevant regulations for the management and monitoring of the environment; 
2. To implement management and monitoring activities, and to report the situation of the environment of the country regularly to the Government; 
3. To act as the coordinating centre between the concerned sectors and local administrations for managing and monitoring any environment activities; 
4. To conduct research and identify methods to protect, mitigate, and restore the environment by using appropriate advanced science and technology; 
5. To monitor and control the implementation of strategic plans, programs, projects, regulations, and laws relating to the environment; 
6. To issue or revoke licenses of any organization engaging in environment related services; 
7. To instruct development projects and activities to prepare environment impact assessment reports according to the regulations on environmental impact assessment; 
8. To receive and response petitions from the population and other parties regarding environmental issues; 
9. To co-operate with authorized concerned sectors in giving orders to adjust, suspend, remove or close down any activities that cause adverse impacts to human health, life, animals, plants and the environment; 
10. To train and upgrade the skills of the environment technical staff, and to educate and raise environmental awareness for all strata of the population in the country in close cooperation with the sectoral agencies and local administrations; 
11. To disseminate, collect and analyse data concerning the environment and natural resources for use as inputs in the national socio-economic planning process; 
12. To promote external relations and cooperation related to environmental issues; 
13. To perform other rights and duties assigned by the Government, or as stipulated in the regulations and laws.

**Article 37. Rights and Duties of Environment Management and Monitoring Units at the Ministerial Level.**

If a ministry is required to establish its environment and monitoring unit, it has to cooperate with the Science, Technology and Environment Agency.
The environment management unit at the ministerial level has the following rights and duties for conducting its sectoral activities:

1. To make and implement plans and regulations about environmental protection concerning its sector based on the general plans and regulation issued by the Science, Technology and Environment Agency;
2. To research, analyses and identify methods to protect, mitigate, and restore environmental problems concerning its sector by using advanced science and technology;
3. To instruct the development projects and activities in its sector to prepare environment impact assessment reports;
4. To monitor the implementation of the environment protection regulations and law;
5. To recommend the authorized authority to issue orders to adjust, suspend, remove or close down any activities in its sector that have caused negative impacts to the human health, life, animals, plants and environment;
6. To report, participate in discussions and exchange experiences with the Science, Technology and Environment Agency, the local authorities, and other concerned parties for mitigating environmental impacts;
7. To train and upgrade the skills of its environmental technical staff and to educate as well as to raise the environmental awareness of all parties in its sector;
8. To disseminate, summarize, and analyse environmental and natural resource information;
9. To promote external relations and cooperation with international organizations on environmental protection issues;
10. To perform other rights and duties for protecting the environment, as assigned by the ministry or as stipulated in regulations and laws.

**Article 38. Rights and duties of Environment Management and Monitoring**

**Units on Provincial, Municipal, and Special Zone Level.**

Provinces, municipalities and special zones shall establish their own environmental management and monitoring units in cooperation with the Science, Technology and Environment Agency.

The provincial, municipal and special zone environment management and monitoring units have the following rights and duties to conduct activities in their areas:

1. To make and implement plans and regulations about environmental protection at the provincial, municipal or special zone level, in accordance with the national environmental protection plan;
2. To research, analyse, and identify methods to protect, mitigate and restore the environment in their respective area by using advanced science and technologies;
3. To report, participate in and exchange experiences on environmental activities with the Science, Technology and Environment Agency, local authorities and the sectoral agencies for mitigating environment impacts;
4. To monitor the implementation of laws, decrees, regulations, and rules on environmental protection;
5. To receive and consider the petitions of the population and other parties on environmental problems;
6. To recommend the authorized authorities to issue orders to adjust, suspend, remove and close down any activities in their areas that have caused negative impact to health and life of human, animals, plants, and the environment;
7. To collect, summarize, analyse, and disseminate environmental and natural resource information;

8. To train and upgrade the skills of the environment technical staff, and to educate as well as to raise the public awareness on environment protection issues;

9. To perform other rights and duties assigned by the Governor, Mayor, and the special zone chief, or as stipulated in regulations and law.

Article 39. Rights and duties of Environment Management and Monitoring

Units on District Level.

Districts shall establish their own environmental management and monitoring units in cooperation with the environmental management and monitoring units at the provincial, municipal and special zone level, in which they are located.

The district environment management and monitoring units have the following rights and duties to conduct activities in their district areas:

1. To make and implement plans and regulations about environmental protection at the district level, based on the provincial, municipal and special zone environmental protection plan;

2. To research, analyse and identify methods to protect, mitigate and restore the environment in their respective district by using advanced science and technologies;

3. To monitor the implementation of laws, decrees, regulations, and rules on environmental protection;

4. To report, participate in and exchange experiences on environmental activities with the provincial, municipal or special zone’s environmental management and monitoring units, local authorities and district sectors for mitigating environment impacts;

5. To receive and consider complaints of the people and other parties concerning the environment;

6. To recommend authorized authority to issue orders to adjust, suspend, remove or close down any activities that have caused adverse impacts to the environment related to their area;

7. To collect, summarize, analyse, and disseminate environmental and natural resource information;

8. To train and upgrade the skills of its environment technical staff, and to educate as well as to raise the people's and other parties in their district awareness of environment protection issues;

9. To perform other rights and duties assigned by the district chiefs, and the environmental management and monitoring units of the province, municipality and special zone, or as stipulated in regulations and law.

Article 40. Rights and Duties of the Village Administration on Environmental Management and Monitoring

The village administrations have the following rights and responsibilities with regard to environmental management and monitoring:

1. To make and implement plans and regulations on environmental protection based on plans, order, rules, and instructions of the district;

2. To disseminate, educate, and raise public awareness and to direct the village people to participate in activities related to protection, mitigation and restoration of the village environment;

3. To monitor the implementation of plans, regulations, rules and instructions on environmental protection;

4. To report, participate in and exchange experiences on environmental activities with the district environmental management and
monitoring units, district authorities and other concerned parties for mitigating environment impacts;

5. To perform other rights and duties assigned by the district or the district environmental management and monitoring units or as stipulated in regulations and laws.

The National Environment Committee (NEC) was established in 2002 under PM Decree No.09/PM and revised by the Decree pertaining to the organization and functions of the National Environment Committee, No. 162/PM, dated 21 June 2009. Its main responsibilities are to coordinate and provide advice to the Government and its agencies regarding environmental management, strategies, regulations and plans. The NEC consists of management level officials from 14 key agencies, and is chaired by the Vice Prime Minister.108

It is a non-standing committee at the central level, with the Department of Environment within the Environment and Water Resource Agency as its secretary (currently upgraded to Ministry of Natural Resources and Environment, MONRE). It has an important role in guiding legal framework in terms of natural resources and environment management and protection.

The Decree on Environmental Impact Assessments provides for the Water Resources and Environment Administration (WREA) to undertake the monitoring of both Category 1 and 2 projects, albeit with different responsibilities for each category.109 The WREA has a duty to inspect the implementation of prevention and mitigation measures of social and environmental impacts.110 It also has a duty to provide technical advice, build capacity and provide training for environmental and social monitoring units.111

The Land Law 2003 provides for a National Land Management Authority112 to manage the land, with rights and duties including:

1. Study and develop policies, laws and regulations.
2. Undertaking surveys of the land, land classification and land use planning.
3. Coordinate with concerned sectors and local administration to plan, protect and develop land, define land areas for certain uses and monitor use.
4. Settle land disputes.
5. Manage State land and protect the environment.113

The Ministry of Agriculture and Forestry is tasked with managing forest land,114 which is land that is covered by forests or determined by the State to be forest land,115 as well as water area land.116 The Ministry of Industry and Handicrafts is tasked with managing industrial land.117 Communication land, part of roads, airports, railways, etc. is managed by the Ministry of Communications,118 while cultural land is managed by the Ministry of Information and Culture.119 The Ministry of National Defence and Ministry of Security manage land for national defence and security.120

The Counter-Corruption Organisation is a State organization that has the mandate to “prevent and counter corruption” by assigning to the State Inspection Authority the task of implementation.121 This organization has powers of investigation. However, at the time of the UNDP translation of this

law, in 2006, there existed no such organization.122

2. Are there laws and/or regulations that hold business enterprises and individuals accountable for business-related human rights abuses, and are they being enforced?

2.1. To what extent do business enterprises and company organs face liability for breaches of laws by business enterprises?

2.1.1. Can business enterprises be held legally accountable as legal persons?

There are four types of enterprises under the Law on Enterprises 2005:123

1. Private enterprise.
2. State enterprise.
3. Joint enterprise.

Within private enterprises, sole-trader enterprises bear unlimited liability. Partnership enterprises and companies, the other types of private enterprise, have status as a legal entity.124 As a legal entity, a partnership enterprise possesses “[t]he legal capacity to exercise rights and obligations, and to be a plaintiff or defendant [in legal proceedings] in the same manner as natural persons.”125

2.1.2. Do organs of a business enterprise (e.g. owners - shareholders, partners, proprietors) face liability when their businesses breach laws?

Article 43 of the Law on Enterprises states that managers of partnerships, among other rights and duties, must act in “the best interests of the general partnership enterprise.”126 Partners bear unlimited liability for debts of the general partnership enterprise.127 General partners in a limited partnership enterprise have unlimited liability for the debts of the limited partnership enterprise; while partners with limited liability in a limited partnership enterprise will be liable to an amount not exceeding the unpaid portion of their subscribed shares.128

2.2. Do laws and/or regulations: (a) require business enterprises to avoid causing or contributing to adverse human rights impacts through their activities, or to prevent or mitigate adverse human rights impacts directly linked to their operations, products or services, and (b) require individuals to ensure their business enterprises do so?

a) Labour

Working Period

Workers should not work beyond eight hours a day or forty-eight hours a week.129 For certain hazardous work, such as exposure to radiation or harmful chemicals, the working hours shouldn’t exceed thirty-six hours a week.130

The following activities are included within time period of work:131

• Time spent on technical preparation at the start and end of work.
• Hourly breaks not exceeding 15 minutes, in certain shift work or differentiated tasks.
• A 45-minute meal break per shift.

122 See notes to Article 37 Anti-Corruption Law 2005, UNDP Draft Translation 2006

130 Ibid.
131 Ibid., Article 17.
The employer must also provide five to ten minutes rest every two hours of work.\textsuperscript{132} Employees can be asked to work overtime, with the consent of the union and the employees.\textsuperscript{133} Overtime should not exceed forty-five hours a month, or three hours a day. It is also not allowed to work overtime every day, with the exception of a natural disaster or other dangerous accident.\textsuperscript{134} Workers are also entitled to one day off a week.\textsuperscript{135} Workers employed on an annual basis, are entitled to fifteen days of annual leave.\textsuperscript{136}

\textbf{Trade Unions}

The law states that the role of a trade union is to act as representatives of the workers, as well as to promote solidarity, educate, train and encourage workers to have labour discipline, and to successfully perform work in accordance with production plans; to protect and promote legitimate interests of workers; to encourage the employer and employees to implement the Labour Law and employment contract correctly and to participate in the settlement of labour disputes.\textsuperscript{137} A trade union must be established in all labour units, and where there is no trade union, workers’ representatives must be established.\textsuperscript{138} Only official trade unions under party control are allowed in Laos.\textsuperscript{139}

\textbf{Employment of Women}

Women who are pregnant or caring for a new-born child cannot perform the following types of work:\textsuperscript{140}

- Lifting or carrying heavy loads.
- Work which entails standing continuously for long periods.
- Hazardous work specified above in Article 16.

Pregnant women or women with children under twelve years cannot be employed to work overtime or during holidays.\textsuperscript{141}

Women employees are entitled to at least ninety days of maternity leave, however at least forty-two days of such leave must be taken after giving birth.\textsuperscript{142} During the one-year period after giving birth, the worker has the right to one hour per day of rest in order to feed or take care of her child if she brings her child to a nursery and to take her child to immunisations.\textsuperscript{143}

A woman employee is entitled to maternity support; an allowance of at least sixty per cent of the minimum wages to be paid by the employer or by the social security fund, if contributions to the social security fund have been fully paid.\textsuperscript{144} If she gives birth to two or more children at the same time, [she] will receive an additional allowance of fifty per cent of the maternity allowance. If she suffers from a certified miscarriage, she is still entitled to this allowance.\textsuperscript{145}

\textbf{Child Labour}

Children who are at least fourteen years of age and less than eighteen years of age, can be employed if they do not work for more than eight hours a day and are not employed in sectors involving heavy work or work that is dangerous to their health, such as:\textsuperscript{146}

- Mining,
- Activities that use chemicals, explosives or toxic substances,
- Work involving the handling of human corpses,
- Work in environment with excessive noise,
- Work in places serving alcohol or with gambling.

• Work at night from 10 p.m. to 5 a.m. of the next day,
• Work specified in Article 16.

**Disabled Workers**

Approximately 70,000 people in Lao have a disability, corresponding to 13% of the population, contributed by the unexploded ordnance problem.\(^{147}\) The definition of ‘disabled’ is unclear, and therefore ambiguous about whom the law protects.\(^{148}\)

Although there is no separate legislation covering disabled workers, the Labour Law specifies that “labour units shall give priority to disabled or handicapped persons to work in their units in accordance with their abilities and skills, and shall give them suitable positions with regular salary or wages as other general workers.”\(^{149}\)

PM’s Decree No. 18 in 1995 appointed the National Commission for Disabled Persons to protect the legal rights of disabled persons, develop policies, raise awareness about issues pertaining to disabled persons, and examine the laws relating to disabled persons, among other duties.\(^{150}\)

**Protection of Workers**

Employers need to be responsible for ensuring that the workplace, machinery, equipment, and production process, are safe and not dangerous to the health of workers.\(^{151}\)

Necessary measures to ensure labour safety include:\(^{152}\)

- Installing appropriate lights or sufficient natural light, limitation of excessive noise, [and] ventilation for air, dust and odours which are dangerous to health,
- A supply of clean drinking-water, showers, toilets, a cafeteria, and changing room for workers,
- A storage room where toxic substances can be kept safely without risk of leakage,
- The provision, free of charge, in a sector where necessary, of personal safety equipment and clothing required by workers,
- The installation of safety equipment or fencing around any dangerous machinery or other dangerous places, and other measures such as devices that warn against or prevent electric shocks, [and] fire and others, as necessary.

Employers must arrange for workers to undergo a medical examination at least once a year, particularly those engaged in heavy work or dangerous work.\(^{153}\) If a worker has an occupational disease derived from the workplace, the employer must be responsible for payment of his medical treatment in accordance with regulations.\(^{154}\) In the case of a contagious occupational disease, [the employer] must give the worker leave to undertake treatment and afterwards reinstate him. All labour units must be equipped with a first-aid kit.\(^{155}\) Units employing fifty or more workers should have a permanent medical staff to treat the health of the workers.\(^{156}\)

Employers must provide appropriate help to a worker suffering from a labour accident or occupational disease, as well as pay for the cost of treatment.\(^{157}\) Alternately if an employee is a member, the social security organisation will bear the costs. In the event that the worker suffers from a serious labour accident or occupational disease or dies, the employer must report to the nearest labour

administration agency within forty-eight hours. If the employee dies, the employer will be responsible for funeral expenses as appropriate but not less than six months’ wages.

b) Environment

Environmental Protection Law

“The Environmental Protection Law specifies necessary principles, rules and measures for managing, monitoring, restoring and protecting the environment in order to protect public, natural resources and biodiversity, and to ensure the sustainable socioeconomic development of the nation.”

According to Article 8, environmental impact assessments are a process of estimating impacts on the environment by development projects and activities. It also identifies methods and standards for mitigating and reducing such anticipated impacts on the social and natural environment. Development projects and activities that have or will have the potential to affect the environment must submit an EIA report for an environment compliance certificate before starting the project. Development projects operating before the enactment of this Law, that have caused losses to the environment, must propose measures to mitigate such losses. EIAs include the participation of the local administration, mass organizations, and the population likely to be affected by the development project.

Businesses have the obligation to use advanced technologies that reduce the harm to the environment, and comply with industry-specific technical standards.

Regarding restoration of the environment, the Law states that “[a]ny person or organization engaged in commercial production, service or other undertaking that causes a disaster is obligated to mitigate the damage and to restore the affected area under the supervision of the local authority or the concerned sectoral agency.” The law states that persons and organizations have an obligation to actively participate in environmental restoration, but it does not specify under what conditions these obligations are applied.

Breaches of these obligations carry the following sanctions under the Environmental Protection Law:

Article 44. Sanctions

Persons or organizations which have violated this law and related legislation on environmental protection shall be subject to the following sanctions: warning, fines, civil sanction, and criminal charges, according to the severity of their case.

Article 45. Warning

Persons or organizations that commit minor violations of this law and related legislation on environmental protection shall be warned and re-educated.

Article 46: Fines

Persons or organizations shall be fined if they:

1. Were warned and re-educated, but did not change their behaviour;
2. Littered or discharged waste causing pollution and affecting public order and beauty of the city;
3. Caused deterioration to water, air, and/or soil quality below the prescribed levels;

166 Ibid., Article 28.
167 Ibid., Article 27.
4. Used or discharged excessive amounts of vibrations, noise, colours, glare, odour, toxic chemicals or radioactive substances, thus violating established standards or other legislation and causing hazards to human health and life, to animals, plants and the environment;

5. Did not comply with the mitigation measures outlined in their respective Environmental Impact Assessment reports;

6. Denied or refused to cooperate with the concerned environmental inspection officers.

**Article 47: Indemnity measures**

Persons or organizations that have violated this law and related legislation on environmental protection, and so doing cause loss of state, communal or private property will be held financially responsible for such losses.

**Article 48: Application of criminal charges**

Persons found guilty of criminal violations of this law or other related environmental legislation by: forging environmental compliance certificates or other environmental documentation, or violating environmental standards or other environmental guidelines leading to loss of health and life, will be punished according to the criminal act.

**Article 49: Additional punishment**

Apart from regular punishment for applicable violations, mentioned under article 45, 46, 47, and 48, guilty persons or organizations may be charged with additional measures such as: suspension of activities, withdrawal of license, closing of enterprise and confiscation of equipment and vehicles that were used in the violation.

**Decree on Environmental Impact Assessment**

The Decree on Environmental Impact Assessment (EIA) issues further guidance on implementing Article 8 of the Environmental Protection Law on EIAs.\(^\text{168}\) The additional objectives of the decree are (emphasis added):

1. To define principles and rules, and adopt measures on establishment, functions, management and monitoring of environmental impact assessment;

2. To ensure that all public and private investment projects, both domestic and foreign, operating in Lao PDR (hereafter called ‘investment projects’) which create or may create adverse environmental and social impacts, are designed with the correct and appropriate environmental and social impact prevention and mitigation measures or environmental management and monitoring plans (EMMP) and social management and monitoring plans (SMMP);

3. To effectively prevent, minimise and resolve adverse environmental and social impacts derived from investment projects;

4. To contribute to and make national socio-economic development sustainable.

The Decree is applicable to all investment projects, which are divided into two categories:

1) small-scale projects with minimum environmental and social impacts, which require an Initial Environmental Examination (IEE),\(^\text{169}\) and 2) larger-scale projects with significant impacts, which require an Environmental Impact Assessment.

\(^{168}\) EIA Decree, Article 1.

\(^{169}\) Article 3 EIA Decree defines Initial environmental examination (IEE) as “studying, surveying, researching and analysing data to estimate initial environmental and social impacts, including impacts on health which may arise from investment projects…as well as identify measures to prevent and mitigate possible environmental and social impacts.”
The Decree states that project developers are liable for the accuracy of the information contained in the reports, as well as the expenses in undertaking the IEE or EIA as required.\(^\text{171}\)

Article 7 states that stakeholders and those affected by the project have the right to receive information on the development plan, IEE or EIA, the benefits they will receive if any, and the environmental and social impacts from the project.\(^\text{172}\) Additionally, they also have the duty to provide information on the local environment and society in the location and vicinity of the project, to assist the preparation of the IEE or EIA.\(^\text{173}\) Stakeholders also have the right to participate in consultations at all levels, and to participate in discussions on compensation, resettlement and restoration of the environment.\(^\text{174}\)

The Decree gives detailed instruction on the process to be undertaken for EIAs,\(^\text{175}\) screening of investment projects\(^\text{176}\) and the participation process\(^\text{177}\) for stakeholders. It further describes in detail the procedures and duties of the Water Resources and Environment Administration (WREA) for undergoing an IEE,\(^\text{178}\) an EIA,\(^\text{179}\) and an Environment Compliance Certificate,\(^\text{180}\) which is issued by the WREA to approve the report on IEE or EIA.\(^\text{181}\)

**Mineral Law**

The Mineral Law 2008 replaced the Mining Law 1997. The Law states that permission must be sought from the Ministry of Energy and Mines for undertaking i) the gathering of basic geological data; (ii) the analysis of mineral samples in the Lao PDR or overseas; (iii) the granting of licenses for prospecting, exploration and mining activities; and (iv) the establishment of mineral processing plants.\(^\text{182}\)

In order to acquire a mining license, the investor must conduct a feasibility study. This is also needed to negotiate a mining concession agreement.

The maximum initial term for a prospecting license is 2 years, with a possible renewal of 1 year; for an exploration license, 3 years, with a possible renewal of 2 years; and for a mining license 20 years, which may be renewed for 5 years.

Foreign investors wanting to enter this sector must negotiate an agreement with the Government, yet the terms of such an agreement are not specified within the Mineral Law.\(^\text{183}\) The Government may additionally exercise its right to participate as a shareholder in mining companies; to do so it must notify the company within 120 days of receiving the feasibility study.\(^\text{184}\)

---

\(^\text{170}\) Article 3 EIA Decree defines Environmental impact assessment (EIA) as “studying, surveying, researching-analysing and estimating of possible positive and negative impacts on the environment and society, including short and long term impacts on health created by the investment projects... as well as offering appropriate alternatives, environmental management and monitoring plan (EMMP), and social management and monitoring plan (SMMP) to prevent and mitigate possible impacts which are likely to happen during construction and operation of the investment projects.”

\(^\text{183}\) DFDL Mekong, “Legal Update.”

\(^\text{184}\) Ibid.
Holders of an exploration license do not have an automatic right to exploit if a viable deposit is discovered.\textsuperscript{185} Existing mining licenses under the 1997 Mining Law will continue in accordance with their agreements. Entities wanting their current agreements to come under the Mineral Law, would have to inform the Ministry of Energy and Mines within 120 days after the Mineral Law’s entering into force. In fact, the law has been in force since 18 March 2009 but it was not published immediately and therefore not available to the public.\textsuperscript{186}

The Minerals Law makes it a requirement that investors contribute to community development funds, with the intention that these funds be used to compensate the community and provides local benefits.\textsuperscript{187}

c) Land

Land is the most abundant resource for Lao PDR and therefore an important “engine for economic growth.”\textsuperscript{188} The country’s key challenges are rooted both in deficient rules as well as in incorrect implementation of the policies and laws.\textsuperscript{189}

Land law in Laos is governed by the 1997 Land Law which was amended in 2003, and further instructions for implementation have been provided by several decrees. Of particular relevance is also the Law on the Promotion of Foreign Investment of 2001 which imposes a responsibility to prevent investment which causes a negative impact on the environment on the respective ministries.\textsuperscript{190}

Land registration and use

Land registration certifies the land use rights of an individual or organisation.\textsuperscript{191} There are two forms of registration:\textsuperscript{192} (i) systematic land registration which is undertaken without request in a particular area, and (ii) land registration based on request, which is undertaken at the request of an individual or organisation. A land title is “the only document which is considered as the main evidence for permanent land use rights.”\textsuperscript{193}

The holder of land use rights has the following rights under Article 53:

- Right to protect land
- Right to use land
- Right of usufruct
- Right to transfer the land use right
- Right relating to inheritance of the land use right

These rights are further defined in Articles 54 – 58 of the Land Law 2003.

Persons who do have the right to use land have some obligations, including:\textsuperscript{194}

- to not cause damage to land quality and to not cause adverse impact to the natural or social environment;
- to not violate the rights and interest of other persons.

Foreign individuals and organisations have certain obligations for land use, including:\textsuperscript{195}

- To not cause damage to land quality and to not cause adverse impact to the natural or social environment.

\textsuperscript{195} Land Law 2003, Article 67.
• To not violate the rights and interest of other persons.

Communal Land

Community land registration and titling (CLRT) projects are being undertaken by the Land Issues Working Group (LIWG) in rural areas of Laos. According to the LIWG 2012 report, the primary obstacle to widespread registration is that the procedures are not fully developed. International donors have reviewed the procedures and created guidelines for CLRT programs.

Article 3, Decree 88/PM on the Implementation of the Land Law, 2008 provides a definition of state land and collective or communal land. Ministerial Direction No. 564/PM/NLMA, 2007 Paragraph 4.11 provides a definition of individual or private land. Ministerial Approval/Decision No. 0054/MAF 1998, relating to customary rights and the use of forest resources, provides that customary rights are respected in all dealings between users and third parties, custom prevails in disputes, resolved in the village system and compensation will be provided where the means of livelihood is affected.

The objectives of communal land titling include ensuring equitable access to resources, poverty reduction, ensuring sustainable use of natural resources, and effectiveness and acceptance of formal land registration by reducing the gap between customary and statutory systems. However, there are some challenges with this process. Customary mechanisms for land allocation are not in line with government goals of gender equity. Also, demarcation of boundaries of communally held lands may create inter-community conflicts, particularly when members of the communities have different access to resources as well as bargaining power.

Collective land is defined by Instruction 564/NLMA, 2007 as “land that the State grants to a group or a collective. The group or collective has the right to protect and to use the land however, the group does not have the right to sell, transfer, lease, or use the land as collateral. The land must not be owned by an individual and the group or collective must consider the land communal land that each member of the group or collective may use. The land must be zoned as a type of land that is approved as communal land.”

Collective land can be registered by the village at no cost, cannot be sold, the state cannot grant land use rights to the land, which protects the villagers from illegal evictions, and it encourages security and tenure of the village. However, the state may requisition the land without compensation, and the collective may be dominated by some members with power. Agricultural land and village use forests can be deemed collective land, however the legislation is not clear on what is and is not eligible for collective land status, there seems to be some ambiguity about it in the literature.

Concessions

State land is zoned and classified based on the geographical landscape and socio-economic situation in each zone by Article 50 of the Law on Investment. Incentives regarding taxes and custom duties are granted depending on the area and level of the investment.

The Land Law states that land lease or concessions from the State to “aliens…or their organisations…shall not exceed thirty years, but may be extended

202 Ibid.
203 Ibid.
205 Ibid.
206 Ibid., 19-21.
on a case by case basis in accordance with the approval of the government. Lease of developed land by Lao citizens to foreigners cannot exceed twenty years, unless with the approval of the local administration. Article 65 of the Land Law states that state land lease or concessions can have a maximum duration of 50 years, but may be extended by the government on a case by case basis. This contradicts Decree 135/PM giving 60 to 70 years for concessions. The process for granting a land concession should include, by statute, a land survey, a land map and a land use plan.

Moratorium 2007

As a response to escalating social, environmental and economic concerns expressed on land concessions, in May 2007, the Prime Minister announced an indefinite moratorium (Announcement No. 743) of land areas over 100 ha for industrial trees, perennial plants and mining purposes. The reason for the moratorium was twofold, the Government saw a need to improve its concession strategy with a view to concerns about the lack of financial returns from concessions as well as social and environmental problems related to concessions. Despite the moratorium, there was still considerable activity with some large projects being divided into smaller parts in order to circumvent the moratorium. A brief lift of the moratorium in 2009 was quickly withdrawn.

d) Economic Law

Investment Promotion Law

The Law on Investment Promotion of 2009 stipulates principles and regulations regarding the promotion and management of domestic and foreign investments. Article 5 of the Law provides certain principles for investments to comply with:

1. To comply with the policy guideline, strategy, socio-economic development plan, development plan of the sector and region, the economic and social expansion in each period, the increase in the living condition of the peoples; and to comply with the laws and regulations;

2. To firmly link with the strengthening of the management of the State in a centralized and uniform manner throughout the country;

3. To ensure that the investment has received the services which are convenient, speedy, transparent, fair and equal before the law through the application of the investment’s one-door-services;

4. To formulate the promotion policy in various fields which can attract and mobilize the investments;

5. To recognize and ensure the protection of lawful ownership, legitimate rights and interests of the investors from the State;

6. To ensure the protection and development of environment, peace and security in the society and in the investment area.

Article 8 of the Law divides investment in Laos into three categories: general business, concession business and activities for development of Special Economic Zones and Specific Economic Zones.

The Law further states that “the applicant for investment in concession activities shall be subjected to the selection made on case by case basis by using different methods, such as: comparison, bidding or evaluation which are performed by the concerned Planning and Investment sector in coordination with the concerned sectors and the local administrative organization in consistence with the laws and regulations. In the selection of investor, the transparency, openness and accountability shall be

209 Ibid.
210 Ibid.
212 Ibid., 7.
ensured.”

Article 69, which states the obligations of investors, includes Clause 3:

“To introduce the social insurance and social security system for the workers in their enterprises in compliance with the relevant law; to promote the employment of Lao labour; give the emphasis on labour skill development, upgrading of specialized skill and transfer of technology to Lao workers.”

In addition, Clause 5 provides:

“To coordinate with the local administrative organization with regard to the business activities; pay the compensation for the damages which are caused by their business; make the contribution to the eradication of poverty of the peoples and to the local development in the area where their projects are located.”

Article 70 further states that investors have the obligation to protect the environment:

“The investors have the obligations to protect and develop the environment, ensure that the business operations have no significant negative impacts to the public, the security and social order or to the health of the labourers. In case of the occurrence of the environmental problems, the investors have the obligation to take necessary measures to solve such situation in a timely manner in accordance with the laws and regulations.”

Article 76, setting out the terms for termination of the investment, includes the following as Clause 1: “The organization issuing the license will be charged with issuing the notification of warning to the investor in case it is found that the business operations are not in compliance with the concession agreement, laws and regulations and have harmful impact to the environment in order to allow the investor to find the solutions and to make the improvement within a period of ninety days, commencing from the date of the notification, and a memorandum shall be made with the investor.”

Foreign Investment Law

The Law on the Promotion of Foreign Investment, 2004, states that foreign investors can invest in all sectors and industries except for those “activities that are detrimental to national security or cause a negative impact on the environment in the present or long term, or are detrimental to health…”

Foreign investors can invest in Lao through:

1. Business cooperation by contract,
2. Joint ventures between foreign and domestic investors, and
3. 100% foreign owned enterprises.

These forms are further defined in the Law.

Foreign investors have several rights and benefits which are set out in Article 12 of the Law, including:

1. The right to receive support from the government in establishing and operating their production.
2. To receive leases and concessions on land, and various rights arising from that.
3. The use of foreign labour, restricted to 10% of the labour force.

The obligations of foreign investors under Article 13 of the Law include:

1. The obligation to pay the necessary taxes, duties and other fees.
2. To give priority to recruiting Lao workers and to train and upgrade their skills.
3. To address matters of social security, health and safety of their employees.

---

214 Law on Investment Promotion 2009, Article 22.
215 Ibid., Article 70.
216 Law on the Promotion of Foreign Investment 2004 (Foreign Investment Law), Article 3.
217 Ibid., Article 5.
4. To protect the environment and ensure that their activities do not severely impact the public, national security or public order.

The Law has determined 3 promoted zones for foreign investment based on geographical location and socio-economic conditions. Each zone has different taxes and duties incentives. The Committee for Promotion and Management of Investment (CPMI) is responsible for monitoring and managing foreign investment.

Enterprise Law

The 2005 Enterprise Law is the primary law governing all enterprises. One of its primary provisions was to reduce the amount of time in incorporating a new business, which could take up to 219 working days. The new Law changes the principle from requiring permission to notification and registration, with the exception for the “negative list” of certain important sectors, which undergo a slightly more detailed procedure. The new EL also removed the need for minimum capital requirements. In keeping with the desire for transparency, the law allows anyone to access the registration documents of a business for a fee. The company registry is meant to be a single access point that brings together different agencies.

Anti-Corruption Law 2005

The Anti-Corruption Law defines principles and measures to prevent and counter corruption. The Act defines corruption as “the act of an official who opportunistically uses his position, powers, and duties to embezzle, swindle [or] receive bribes or any other act provided for in Article 10…to benefit himself or his family, relatives, friends, clan, or group and causes damage to the interests of the State and society or to the rights and interests of citizens.”

The Act is concerned with both preventing corruption from taking place as well as fighting and punishing corruption already taking place, which is termed as “countering” in the Act. The obligation to prevent and counter corruption rests with government organisations, social organisations, the media as well as citizens.

The Act enumerates a number of actions that constitute corruption, such as:

- Embezzlement of state property or collective property.
- Taking bribes.
- Abuse of position and power to take state, collective or individual property.
- Cheating or falsification of technical construction standards.
- Forging documents.
- Disclosure of state secrets for personal benefit.

These actions are further defined in the Law.

The State has the following duties to prevent corruption:

- Educate the public to respect and comply with the laws.
- Improve governance mechanisms to ensure transparency.
- Define and implement policies toward government staff at each level.

232 Ibid., Articles 11 – 21.
233 Ibid., Article 23.
• Impose discipline and punishment on offenders.
• Promote public participation in preventing and countering corruption.234

Sanctions and Punishment:
For minor offences, willingly reported and where full restitution is made, the offender will be given a warning and “education measures.”235

For minor offences that were not willingly reported, the disciplinary measures include:236
• Criticism and a note in his file.
• Suspended from receiving a promotion or raise.
• Removal or transfer from the position.
• Dismissal from position.

All property that was taken must also be returned.

Where there is evidence, the counter-corruption organisation must send the case to the public prosecutor.237 If the public prosecutor fails to prosecute within 30 days, the counter-corruption organisation can submit to a higher level of prosecutor.

Actions enumerated under Article 10 are subject to penal sanctions.238 For cheating or falsifying technical standards, the offender will be subject to five years’ imprisonment and fined 1% of the damages.239 For falsifying “on a regular basis,” the punishment is five to fifteen years and fined 1% of the damage. When undertaking this as part of “an organised group and caus[ing] severe damage,” the punishment is fifteen to twenty years and fined 1% of the damage.240 For disclosure of state secrets, the punishment is 3 months to one year, with a 1,000,000 to 5,000,000 Kip fine (USD 126 – USD 628).241

Additional regulations that relate to anti-corruption are the changes to the Penal Code to include specific penalties for corruption and money laundering which were approved in October 2005, as well as the Anti-Money Laundering Decree which was approved in May 2006. Lao PDR signed the UN Convention against Corruption in 2003. There are wide-ranging requirements imposed by the Convention, many of which Lao PDR doesn’t have the capacity to implement.242 Lao PDR is also a party to the UN Convention against Trans-national Crime.

Additionally, the Law on Promotion of Investment contains the following provisions on prohibition of taking bribes:

**Article 72. Prohibitions for Officials**
The officials are prohibited to perform the following acts:

1. To abuse the power, functions, position for illegal personal benefits;
2. To accept the bribe from the investors or from the persons seeking personal interest from the investment;
3. To disclose the confidential documents of the nation, of the offices and of the investors;
4. To delay or extend [the] time to consider the documents of the investors without reason;
5. Perform other acts which are the prohibitions stipulated in the laws and regulations.

**Article 73. Prohibitions for the Investors**
The investors are prohibited to perform the following acts:

1. To give the bribe to State authority and officials in charge of the concerned works;

2. To evade the fulfillment of the obligations; conceal the revenue, profits as well as the figures relating to the custom duties and taxes payment;

3. To make the false allegations or slandering propaganda against the State organization and the officials;

4. Perform other acts which are the prohibitions stipulated in the laws and regulations.

Women have the right to “work in safe conditions and environments, to social security, and to remuneration and other benefits…”

### e) Women and Children

**General Rights and Protection**

The Law on the Development and Protection of Women 2004 aims to protect the rights of women, and outline the measures to be undertaken for developing and promoting their advancement in society. The Law specifically states that women in Laos play a role in all sectors of the country, including politics, the economy, national defence, and protection of the environment. The development of women refers to these aspects:

- Physical development
- Mental development
- Educational development
- Professional and skills development

These aspects are further defined in the Law in Articles 9-12. The Law also states that men and women possess equal rights, equal political rights, equal economic rights, equal cultural and social rights, and equal rights in the family. Women have the equal right to inherit property, and a wife has equal right to matrimonial property.

### Trafficking of Women

Trafficking is defined in Laotian Law as “the recruitment, hiding, moving, transportation, transfer, harbouring, [or] receipt of women, within or across national borders, by means of deception, the giving or receiving of bribes, threats, the use of force, [the use of] other forms of coercion, abduction, debt bondage or by other means, for forced labour, [for] prostitution, [for] publishing pornography and what is in contradiction to fine national culture, [for] the removal of various body parts, or for other unlawful purposes.”

Victims have the right, among others, to request for compensation, to be rehabilitated, to receive protection and not to be prosecuted on any charge of trafficking. The law also makes provision for a national committee for prevention of trafficking in humans.

In June 2000, the National Project Committee for the collaboration with the UN Inter-agency Project to Combat Trafficking in Women and Children in the Mekong Sub-region was established. In 2002, Lao PDR and Thailand concluded a bilateral agreement attempting to improve the management of labour migration between the two countries. In 2005, they concluded an MOU on Trafficking to combat human trafficking, especially women and children. Lao PDR has also concluded extradition agreements with Thailand, Vietnam, and other countries.

China and Cambodia which could potentially cover suspected traffickers. Laos is also a member of the Coordinated Mekong Ministerial Initiative against Trafficking (COMMIT) and signed the COMMIT Ministerial Declaration and corresponding MOU in 2004.

Children's Rights

The Law on the Protection of the Rights and Interests of Children 2006 defines a child as a person under 18 years of age. The rights provided by the law to children include the right to education, access to health care, participation in sports, artistic and literary activities, and protection from abuse. The Law states that the “best interests of the child” will be the deciding factor in decisions about the welfare of the child. Article 6 states that “[a]ll children are equal in all aspects without discrimination…”

The State will create conditions for access to health care for children, care of children affected by HIV, education for disabled children and education for children with HIV. Disclosure of the HIV / AIDS status of children is illegal.

The law requires the Ministry of Labour and Social Welfare to establish a Committee for Protection and Assistance to Children, to monitor children who are at risk and need special protection and provide assistance and inspection of services provided. A Child Labour and Child Trafficking Office (CLCT Office) was set up within the Ministry of Labour and Social Welfare (MOLSW) in 2001 to coordinate interventions for confronting the child labour problem, including the trafficking of children. Additionally, the Lao Government ratified ILO Conventions No. 138 and No. 182 in 2005.

Sanctions

Persons committing trafficking against women and children will be punished with five – fifteen years of imprisonment and fined 10,000,000 – 100,000,000 Kip (USD 1,257 – USD 12,566). With organised offenders, offending against multiple victims or child victims, the punishable term is fifteen – twenty years, with a fine of 100,000,000 – 500,000,000 Kip (USD 12,566 – USD 62,830). Where the victim is infected with HIV, incapacitated for life or killed, the offender will receive life imprisonment and fined 500,000,000 – 1,000,000,000 Kip (USD 62,830 – USD 125,660). Accomplices will receive four-ten years and fined 5,000,000 – 50,000,000 Kip (USD 628 – USD 6283).

Producing, distributing, selling any item of child pornography is punished by one – three years imprisonment and fine of 2,000,000 – 6,000,000 Kip (USD 251 – USD 754). Using child labour in hazardous sectors is punishable by imprisonment of three months to a year, with a fine of 1,000,000 – 2,000,000 Kip (USD 126 – USD 251). If the use of child labour causes disability or death, the term of imprisonment is three – seven years and 3,000,000 – 7,000,000 Kip (USD 377 – USD 880).

2.3. To what extent, how, and by whom have the laws and/or regulations identified in Question 2.3 above been enforced by the State?

a) Labour

General labour law

The ILO report states that the implementation of the 2006 labour law is patchy, and the ratification by Lao of certain ILO conventions would require changes to the current domestic law.274 The MOLSW is hampered in its effectiveness due to limited technical capacity, management capacity and information deficits.275

The establishment of an Occupational Safety and Health (OSH) Master Plan in 2005 by the MOLSW was an important step, however, implementation and enforcement remains a challenge.276 The use of new technologies and chemicals within industrial processes lead to risks unknown by workers or, in some cases, OSH inspectors.277 Lao PDR is currently coordinating the ASEAN Occupational Safety and Health Network (ASEAN-OSHNET).278

The LFTU, established in 1966, is the only national workers’ organization, and it maintains the status of a ministry with subsidy support (both staff and activities) from the Government.279

The Lao National Chamber of Commerce and Industry (LNCCI) was established in 1989, and it provides the Government with views and comments on business operations as well as protecting the rights and interests of enterprises.280

b) Environment

The Lao government has many laws and regulations governing environmental issues, such as requiring Environmental Impact Assessments (EIAs), requiring the negative impact on the environment to be minimised, and ensuring that those affected by projects are adequately compensated. However, most of these regulations are implemented patchily at best, and lack of adequate data renders the level of implementation unclear.284

Strategic Environmental Assessments (SEA) is a systematic processes to evaluate the environmental consequences of policies, plans and programs.285 SEAs provide information beyond just a single project, and are thus useful for regional level planning.286 Lao doesn’t have a policy for conducting SEAs, however some have been conducted, such as one commissioned by the Mekong River Commission.287

287 Ibid.
Hydropower Projects

Spatial data can be helpful to determine more accurately the extent of impact from mining and hydropower projects on the vulnerable populations in the vicinity; however, there is no database in Laos that combines such data for these projects.288 A preliminary analysis conducted on the available data suggests that with the information available at the time of the study, 293 villages would be affected by the proposed hydropower projects,289 affecting around 100,000 people.290 Around 49,000 people live within an hour's walk of a current or planned reservoir, many of whom will be affected by direct or indirect effects.291

The biggest hydropower project in the country's history is currently being realised: the Nam Tehun II project. A pre-feasibility and environmental study conducted on the Ban Kum Hydropower project illustrated the negative impacts that the project would have on the people living in villages in the vicinity. It would flood four villages, on both sides of the Mekong River, and have a negative impact on fisheries on the river, impacting the food security of villages dependant on that income.292 The report also found that the EIA conducted previously was inadequate, and ignored the potential impacts on the villages' ecosystem.293 Another report states that villagers are not consulted on dam projects, but informed of the location of the dam once the agreements are signed.294

On another project, the French company EDF has been accused of violating OECD Guidelines regarding their services to the Nam Theun 2 hydropower project, and a coalition of 62 NGOs referred the issue to the French National Contact Point.295 Members of the Lao diaspora are deeply opposed to the project, fearing that the economic benefits wouldn't trickle down to the poor, and the costs would have to borne disproportionately by the disadvantaged.296

Mining

According to the MEM, by November 2010, there were 263 mining projects in Laos,297 although 16 mining concessions have been revoked by the Government.298 According to a Vientiane Times article, the Mines Department Deputy Director General stated that “the ministry was inspecting the operations of mining projects around the country, aiming to complete a full assessment by early 2013. Several officials at the Mines Department admitted their capacity for managing mining operations is limited as the government had approved too many mining projects.”299 It is difficult to estimate the numbers affected by mining concessions, but the study estimates that around 114,000 people are living in mining exploitation areas and would be potentially affected.300 As many mining projects are small and medium-sized, they are less likely to implement environmental standards.301 Artisanal and informal mining are also contributing to pollution and erosion problems.302 In addition, mining projects also require access to infrastructure, which often needs to be subsidised by the Lao government.303

289 Fenton and Lindelow, “Socio-geography of mining and hydro,” 6. The study only took into account those projects which had concluded a Memorandum of Understanding, and the projects for which GIS data was available, which was 42 out of 90 current or planned hydropower projects. According to the Ministry of Energy and Mines, there are 63 projects for which there is no MOU and these were not included in the analysis.
290 Ibid., 7.

292 Earth Rights, “I Want To Eat Fish,” 113.
293 Ibid., 117.
294 Ibid., 124.
296 Ibid.
298 Ibid., 3. This data is accurate as of December 2010.
302 Ibid.
303 Ibid., 3.
Data collected from the 2005 Census, and other available data suggest that those affected by the hydropower and mining concessions are among the poorest households in Laos; they are also disproportionately likely to be illiterate and belong to an ethnic minority group. The areas targeted are generally remote and lack access to health and education. When the mining and hydropower projects have negative impacts on society and the environment therefore, they disproportionately impact the poorest, and those from the minority communities; causing the costs of development to be borne by those who can least afford it.

**Investments and concessions**

There is evidence to suggest that the government, in its zeal to acquire investment, is failing to secure the most economic advantages for its people. Perera argues that the Lao government is under the mistaken assumption that unless financial incentives are offered, foreign investors will not be interested in investing in Laos. The Government offers tax holidays for up to 10 years for certain sectors, exempt import and export duties and income tax for public sector investments. Incentives for concession investments are negotiated on a case-by-case basis, and the final details are not released to the public, thus blocking transparency.

Ideally, natural resource wealth can be used to promote better governance rather than, potentially, exacerbating poor governance and corruption (resource curse). Yet, in the case of hydropower investments, often land conversion fees are waived, unlimited foreign labour is permitted, and various other waivers and tax exemptions, which make the

c) Land

Land resettlement programs

Government resettlement programs of ethnic minorities has led to land shortages and conflicts, as the new land is of poor quality, forcing the community to travel to their old land for economic reasons.\(^{319}\) Government policy to replace shifting cultivation has resulted in the movement away from upland rice to annual cash crops, which has negatively impacted the soil quality and environment, and has implications for food security.\(^ {320}\)

The Land and Forest Allocation (LFA) Policy, 1996, was meant to encourage productive use of land in rural areas and halt environmental degradation by controlling the expansion of shifting cultivation, especially in the upland areas.\(^{321}\) However, Fujita and Phanvilay argue that LFA has instead contributed to unexpected social and environmental problems.\(^ {322}\) The LFA was credited with being a progressive land management policy, with the government recognising the customary resource use practises of the local population, as well as collective and private use of land.\(^ {323}\) LFA allowed villages to draw up a resource use policy together with local officials, and by 2003, more than 5,000 villages were stated to have completed this procedure.\(^ {324}\)

However, Fujita and Phanvilay argue that the LFA reduced the villager’s access to swidden and fallow lands, adversely impacting their income.\(^ {325}\) The government reportedly ignored the customary use of the land, and the reclassification resulted in shortening the fallow period, lower rice production and soil erosion.\(^ {326}\) The authors argue that the government’s zoning simplified a complex relationship between the people and the land, which negatively impacted both.\(^ {327}\) This was partly due to dwindling funds allocated for the implementation of the program resulting in an inadequate monitoring system.\(^ {328}\)

Land registration and titling

On average, an agricultural household has between 0.5 – 3 hectares of land for private use, aside from access to village and communal land.\(^ {329}\) Deforestation is a significant concern, with the forest cover having reduced from 41.5% in 2002 to 35% in 2007.\(^ {330}\) It is estimated that land concessions count for up to 13% of total land area of Lao, between 2 – 3 million hectares.\(^ {331}\) According to Wellmann, often the legal background and framework for granting state land leases are unclear to the parties involved.\(^ {332}\) A GTZ report states that concessions are even granted twice on the same land, contributing to land conflicts.\(^ {333}\)

There are 6 types of legal documents related to land ownership and land use: land title, land survey certificate, temporary land use certificate, land tax declaration, land tax receipts and village heads certificate on land ownership.\(^ {334}\) The need for multiple documentation reduces transparency and due to the various fees may foster corruption.\(^ {335}\) Even a completed documentation does not guarantee protection when conflicts related to land concessions arise.\(^ {336}\)

\(^{334}\) Ibid., 10-11.

\(^{335}\) Ibid., 14.

\(^{336}\) Ibid., 11.
In 2010, the National Assembly urged the government to complete the formulation of a national master plan for land survey and allocation as a way to resolve land disputes. According to the Vientiane Times, the deputy head of the NA’s Economic, Planning and Finance Committee, Dr Souvanpheng Bouphanouvong, said that without specific land allocation, land disputes would be impossible to settle.

Land management
Current land management strategy in Laos is characterised by high levels of local and foreign investment in agriculture, mining and hydropower. Despite positive regulatory action on the part of the government, such as the moratorium on new land concessions, the effectiveness of the programs is hampered by the lack clear definitions of roles and responsibilities for the different agencies. Often the various agencies duplicate tasks and even compete with each other. This problem is compounded by the fact that provincial authorities often exceed and improperly execute their mandate with regard to new projects, and fail to carry out proper environmental assessments.

Table summarising key issues and policy options

338 Ibid.
340 Ibid.
341 Ibid.
342 Ministry of Agriculture and Forestry, “Policy Brief #2,” 1.
343 Ibid., 3.
The factors that contribute to corruption are the extent of government involvement in the economy, the quality of governing institutions, the lack of economic and political competition, the prevalence of poverty and inequality, and the lack of media freedom to provide checks and balances. Laos’ abundant natural resources also create opportunities for rent-seeking activities leading to the natural resource curse. It has also been argued that international aid agencies may unknowingly

345 Ibid., 7.
347 Ibid.
contribute to the culture of corruption.\(^{348}\)

The UNDP Baseline Study on Corruption groups the factors affecting corruption in Laos into five categories: political, economic, developmental, institutional and legal.\(^{349}\) Transition of government from a command economy to a market economy, and the opening up of the country created an impetus for demand for material goods, and the desire for corrupt practices.\(^{350}\) Also, some elite groups are influential enough to control policy decisions, and benefit themselves.\(^{351}\)

The State is involved at every level of decision-making, and can interfere in cases of corruption. The Baseline Study postulates that this explains why no high-level official has been prosecuted for corruption; the political will to implement the law against corruption is lacking.\(^{352}\) Politicisation in appointments, the entrenched patronage system, low government salaries and a culture of secrecy compound the problem.\(^{353}\) Smuggling of natural resources, especially illegal timber logging takes place not only with official knowledge but also collusion, as members of the military are said to own timber companies.\(^{354}\)

The prevalence of corruption reduces the available funds for public services due to the reduced revenue collections, and contributes to widening the gap between the rich and poor.\(^{355}\) In the longer run, it also impacts the credibility of the government and foreign donors’ support.\(^{356}\) Domestically, there are political, economic and social effects that impact the stability and security of the country.\(^{357}\)

e) Women and Children

**Trafficking and Migration**

The UN Protocol on Trafficking\(^{358}\) adopted a definition of trafficking: “the buying, selling and movement of persons within or between countries through (in the case of adults) a range of means such as coercion and deception, for the express purpose of exploiting them.”\(^{359}\) Lao’s law against trafficking contains a similar definition, but does not include the trafficking of men, although many of whom are vulnerable.\(^{360}\)

There are no official statistics on the number of trafficked persons in Laos available. In 2011 the Lao Government reported investigating 49 cases of trafficking, and convicting 37 offenders.\(^{361}\) However, weak institutions, bureaucratic inefficiencies, lack of resources, and the inability of the government to identify victims of trafficking were cited as reasons for slow positive progress.\(^{362}\)

Laos’ definition of trafficking in children is consistent with the UN Trafficking Protocol.\(^{363}\) According to official Lao figures, between 1997 and 2000 90 children were rescued from Thailand and sent back to Laos; however, the ILO report stated that many returnees were undocumented by the ministry.\(^{364}\) Most illegal labourers returned to Laos are between the age of 14 and 24, and 60% of them are women and girls.\(^{365}\) Many of them have been repeatedly arrested and sent back by Thai authorities.\(^{366}\)

There is a greater tendency for girls to drop out of school than boys. Girls represent 40% of students completing primary school, but also 77% of those dropping out early.

Due to its situation at the hub of the Greater Mekong Subregion and its shared borders with Cambodia, China, Myanmar, Thailand and Viet Nam Lao PDR is – in the words of the World Bank – “extremely vulnerable” to trafficking. Trafficking networks exist in villages close to the border areas that recruit illegal migrants for border crossings. The high number of school drop outs, resulting low level of education, lack of vocational opportunities, high level of dropouts among girls, a narrow industrial base and organised trafficking networks are the primary factors that lead to the high levels of trafficking in Laos.

In addition, the Mekong River creates a natural border between parts of Lao and Thailand, and creates additional challenges for monitoring trafficking across the border, especially as border crossings for social and economic purposes is common.

The judicial system in Laos is ill-equipped to prosecute crimes of trafficking that are complex and difficult to prove. The Lao Anti-People Trafficking Unit (LAPTU) receives complaints regarding trafficking and is the primary agency responsible for investigating trafficking. In order to strengthen the criminal justice response to human trafficking, UNFOC launched a three-year project in partnership with the Ministry of Justice in 2011 and is making available US$750,000.

While the law provides for support such as medical treatment, counselling and protection and assistance from the Lao embassy to victims of trafficking abroad, implementation is difficult. Several countries noted that Lao PDR made progress in combatting trafficking during the last UPR but nevertheless called for additional efforts.

3. Is the State periodically assessing the adequacy of the laws and/or regulations identified in Question 2 above, and addressing any gaps?

A number of the relevant laws detailed above have been enacted after 2000, and the Constitution of Lao itself was amended in 2003. This might be a sign that the Government, which is keen to attract foreign investment and is cooperating with international organisations such as UNDP, is open to address gaps in the existing laws. However, it appears that enforcement of laws is a bigger challenge, especially where enforcement mechanisms lack the capacity for enforcement of laws.

4. Is the State using corporate governance measures to require or encourage respect for human rights?

Article 5 of the Law on Enterprises states that business enterprises “have the obligation to conduct their business operations in accordance with their business purposes, to keep accounting books, to perform fiscal obligations towards the government, to protect the workers’ legitimate rights and interests, to preserve the environment, and to uphold other relevant laws and regulations of the Lao PDR.” This article suggests that at the very least, protecting the rights of workers and the protection of.

367 Ibid., 20.
368 Ibid., 21.
370 Phetsiriseng, “Preliminary Assessment on Trafficking,” 32.
371 Ibid., 52-54.
372 Ibid., 16.
375 Protection and Development of Women Law, Article 33.
376 Ibid., Article 28.
of the environment are obligations that businesses must fulfil.

4.1. **Is the State requiring or encouraging directors of business enterprises to exercise due diligence in ensuring that their business enterprises respect human rights?**

4.1.1. **What are the general legal due diligence obligations that directors have to comply with?**

The Law on Enterprises states that a director will be liable for the following acts:379

1. Acting outside the scope of the limited company’s business purpose specified in its bylaws or in the contract of incorporation;
2. Breaching the bylaws of the limited company;
3. Exercising rights and performing duties beyond the assigned scope of power;
4. Failing to exercise assigned rights or perform assigned duties.

Directors can be held liable for breach of duties towards third parties and can be held liable by limited companies.380 However, this liability is only for breach of their duties. The Law states that the duties of directors include:381

1. Administering the business of the limited company in compliance with the contract of incorporation, the bylaws of the limited company and the resolutions of the shareholders’ meeting;
2. Calling and collecting payments for shares at the determined amount and at the defined time;
3. Managing and using the capital of the limited company in accordance with the defined purpose and goal;
4. Establishing the accounting system, maintaining and filing all documents of the limited company;
5. Cooperating with the auditors by providing clarifications on the source and accuracy of numbers and information appearing in the balance sheets before submitting them to the shareholders’ meeting for adoption;
6. Sending copies of the balance sheet to the shareholders and keeping copies for review by holders of bearer shares when required;
7. Properly distributing the profits;
8. Administering and deploying officers or employees of the limited company;
9. Informing the company of their direct or indirect involvement in transactions of the limited company that could benefit them or of any increase or reduction of their shareholding in the limited company or in the company’s subsidiaries within the accounting year.

The above duties cannot be interpreted easily to include obligations to consider the human rights impacts of their businesses.

4.1.2. **Do directors have specific legal obligations to consider their business enterprises’ human rights impacts in carrying out their duties?**

See above answer.

---

380 Ibid., Article 122.
381 Ibid., Article 124.
4.1.3. Do directors have specific legal obligations to take into account the human rights impacts of subsidiaries, suppliers and other business partners, whether occurring at home or abroad (supply chain)?

“Do directors have specific legal obligations to take into account the human rights impacts [of] subsidiaries, suppliers and other business partners, whether occurring at home or abroad (supply chain)?"

No information available

4.1.4. Have any of the directors’ duties identified above been enforced by the State in relation to business-related human rights abuses?

No information available

4.1.5. Has the State provided non-binding guidelines encouraging directors to take into account (a) their businesses’ human rights impacts in carrying out their duties, and/or (b) the human rights impacts of subsidiaries, suppliers and other business partners, whether occurring at home or abroad (supply chain)?

No information available

4.2. Does the State require or encourage business enterprises to communicate their human rights impacts, as well as any action taken to address those impacts?

Not to our knowledge.

4.3. Is/are the country’s stock exchange regulator(s) taking steps to require or encourage business enterprises listed on the stock exchange to respect human rights? If so, what are these steps?

The Lao Stock Exchange was established in 2010 as part of the 5 year plan adopted by the 6th Session of the National Assembly. There is a paucity of information on the fledgling stock exchange. In its Disclosure Regulation, the LSX has a provision for voluntary disclosure for companies:

“This could be interpreted to include voluntary human rights reporting.

5. Has the State adopted other non-binding measures to foster corporate cultures respectful of human rights?

Laos is a member of the Kimberley Process Certification Scheme. The Kimberley Process is an initiative between States and companies that currently has 51 participants, both countries and business representatives. The Process regulates the diamond industry, to ensure that the sale of diamonds is not financing rebel movements. It is implemented through national legislation by its participants. The certification scheme requires its members to take stringent steps to ensure legitimate shipments, and only trade with other members. If a member fails to adhere, they lose membership and are no longer able to trade with members of the Process. However, recently there have been some doubts about the efficacy of the scheme, with Global Witness, one of the primary movers behind the creation of the Process, leaving the Kimberley Process.

---

385 “Basics.”
5.1. Is the State implementing any non-binding initiatives requiring or encouraging business enterprises to respect human rights?

One Lao PDR NGO, the Greater Mekong Sub-region Business Forum (GMS-BF) is an active participant of the Global Compact since 2005. The GMS-BF is the only participant of the Global Compact from Lao PDR.

5.2. Is the State providing guidance to business enterprises on how to respect human rights throughout their operations?

No official information is available.

6. Is the State taking steps to require or encourage business respect for human rights in its own relationships and dealings with businesses?

Laos has a decentralised system of public expenditure, giving provincial administrations extensive discretion over the use of resources. There is very little transparency over the budget process, and the budget cycle is limited, leaving no room for consultation.

6.1. Does the State require or encourage State-owned or controlled business enterprises to respect human rights?

Between 1989 and 1997, Laos privatised most of its State-owned enterprises, with the exception of 20 enterprises that were deemed to be ‘strategic’, and a few that were difficult to sell. Some resource extraction companies are also said to be controlled by senior members of the military. There not seem to be a specific human rights policy in place for state-owned or controlled enterprises.

6.2. Does the State require or encourage businesses that receive substantial support and services from State agencies (“beneficiary enterprises”) to respect human rights?

The government-owned banks had to be restructured and refinanced due to non-performing loans made to state-owned enterprises and politically well-connected persons. However, the World Bank has reported that the level of new loans is still too high, an indicator that the policies have not been changed. There is no indication that support has been linked to any human rights policy or commitment.

6.3. When services that may impact upon the enjoyment of human rights are privatized, is the State taking steps to ensure that the business enterprises performing these privatized services respect human rights?

No information available.

6.4. Does the State require or encourage respect for human rights in carrying out public procurement?

According to the Baseline Study on corruption, public procurement in Lao is subject to interference, both explicit and implicit, in terms of openly promoting a company with ties to the government, and reduced competition, arbitrary pre-qualification of bids and breaching confidentiality of bids.

In 1997, the Government established a Procurement Management Office to clarify procurement procedures. This office was closed in 2000, but re-established in 2003. It revised the Procurement Decree, developed new rules and regulations and drafted a manual for district officials.

388 UNDP, "Anti-corruption Baseline Study," 34.
389 Ibid.
391 Ibid., 15.
392 Ibid., 16.
395 Ibid.
396 Ibid., 43-44.
397 Ibid., 44.
rights are not explicitly mentioned in these documents.

Aid agencies like the World Bank and ADB are interested in ensuring that public procurement becomes as transparent as possible, as that improves the distribution of aid funds. The World Bank prepares Country Procurement Assessment Reports (CPAR) “intended to be an analytical tool to diagnose the health of the existing system in a country.”

Where specific procurement procedures are prescribed by multilateral and foreign donors in their loan, credit or grant agreements with the Government, these take precedence over national procedures. Approximately 80% of Government capital expenditure is currently assisted by multilateral credits or grants from donors.

The 2003 World Bank CPAR found that many government officials were unaware of the existing procurement legislation’s provisions, due to lack of training and frequent turnover of staff.

7. Is the State taking steps to support business respect for human rights in conflict-affected and high-risk areas?

Officially Laos does not have any conflict-affected areas within the country. However, until recently there was an armed conflict between the government and the Hmong people. The plight of the Hmong people has only been brought to light recently, not least during the last UPR in 2010.

While numerous human rights violations have been listed with regard to the Hmong people, there does not seem to be a considerable amount of business involvement.

It seems that the passing away of former Hmong leader General Vang Pao in 2011 eventually ended the conflict. Hmong members now serve on the LPRP Central Committee, as ministers in the government, and as governors of provinces.

7.1. Is the State engaging with business enterprises operating in conflict-affected and high-risk areas in relation to identifying, preventing and mitigating the human rights-related risks of their activities and business relationships?

As there is no conflict officially, there are no policies by the State concerning businesses operating in this area.

7.2. Is the State providing assistance to business enterprises operating in conflict-affected and high-risk areas to assess and address the heightened risks of human rights abuses, including gender-based and sexual violence?

7.3. Is the State denying access to public support and services for business enterprises operating in conflict-affected and high-risk areas that they are involved with human rights abuses and refuse to cooperate in addressing the situation? Are there laws, regulations and/or policies that have the effect of doing so?

See above.

---

399 UNDP, "Anti-corruption Baseline Study,” 44.
400 Ibid.
7.4. Has the State reviewed its policies, legislation, regulations and enforcement measures with a view to determining whether they effectively address the risk of business involvement in human rights abuses in conflict-affected and high-risk areas, and taken steps to address any gaps?

8. Is the State taking steps to ensure coherence in its policies domestically and internationally such that it is able to implement its international human rights obligations?

8.1. Is the State taking steps to ensure that governmental departments, agencies and other State-based institutions that shape business practices are aware of and observe the State’s human rights obligations when fulfilling their respective mandates?

8.2. Is the State taking steps to maintain adequate domestic policy space to meet its human rights obligations when concluding economic agreements with other States or business enterprises?

Can and Leader argue that the Nam Theun II project Concession Agreement (CA), which has as much legal binding as a legal regulation, binds the Government in a way so as to potentially violate its international obligations.404 The CA combines two roles of the Government, as an investor and as protector of potential environmental and social concerns.405

According to the CA, the Government would have to compensate the investors if it enacts laws that negatively impact the profits from the project above a certain, not disclosed threshold.406 On the other hand, the company would have to compensate the government for respective increases in profit or cost reduction.407 Since the thresholds have not been disclosed to the public, assessing the impact of the compensation clause is difficult. Generally, such clauses bear the risk of preventing a government from changing its social and environmental law due to the involved costs.

8.3. Is the State taking steps to ensure and promote business respect for human rights when acting as members of multilateral institutions that deal with business-related issues?

The CEDAW report stated that the various government agencies mandated with responsibilities for women’s issues were uncoordinated, lacking sufficient resources and clear mandates to be effective.408

The CEDAW report recommended putting in place a comprehensive strategy to remove stereotypes and traditional practises that discriminate against women, in conformity with articles 2(f) and 5(a) of the Convention.411 The report also recommends ensuring equal opportunities for women in the labour market, in accordance with article 11 of the

405 Ibid., 2.
407 Ibid., para. 72.
408 CEDAW, “Concluding observations,” ¶ 17.
409 Ibid., ¶ 9.
410 Ibid., ¶ 11.
411 Ibid., ¶ 22.
9. Is the State taking steps to ensure, through judicial, administrative, legislative or other appropriate means, that when business-related human rights abuses occur within their territory and/or jurisdiction those affected have access to effective remedy?

In 2005, the Lao Government presented a policy paper indicating its intention to strengthen the Rule of Law to improve governance. In 2006, a draft Legal Sector Master Plan (LSMP) was drafted, which evaluated the legal system. The LSMP aims to co-ordinate legal system development between the various stakeholders, official and unofficial, in the sector and is based upon four ‘pillars’ of the system:

i. The framework of laws, decrees and regulations;

ii. The law-related institutions that implement the legal framework;

iii. The means for educating and training officials on the use of the system; and

iv. The means for ensuring that all laws and regulations are accessible to both state bodies and citizens.

The LSMP was officially endorsed by the government in 2009.

Among the key issues with regard to the justice system raised in a survey conducted by UNDP were land conflicts and especially for women labour issues.

9.1. What are the legal and non-legal State-based grievance mechanisms available to those seeking remedy for business-related human rights abuses?

The Ministry of Justice (MoJ), aside from preparing draft legislation, is also tasked with, among others, the dissemination of legislation, administering lower courts, overseeing the legal profession, and monitoring the work of Village Mediation Units (VMUs).

There are four levels of courts: area, provincial, regional and People’s Supreme Court. In 2009, approximately 8,500 cases were brought to court throughout Laos. Due to the type of cases they handle and their proximity to the people, area courts are most significant.

The Office of the Public Prosecutor is also present at different levels. Aside from prosecutorial functions, the Office also serves to monitor general compliance with the law, as well as ensuring the fairness of dispute resolution mechanisms.

A Village Mediation Unit is a semi-formal mechanism under the supervision of the MoJ. A UNDP report stated that in 2011 there were 8,766 VMUs in Laos, dealing with 8,118 complaints.

Petitions by Citizens

The Law on the Handling of Petitions “defines principles, regulations and measures relating to petitions and to dealing with the petitions of citizens or organisations.”

412 CEDAW, “Concluding observations,” ¶ 36.
413 UNDP, “Access to Justice Survey,” 89.
414 Ibid.
415 Ibid., 90.
416 Ibid.
417 Ibid., 94-95. The data can be seen in the original report, this is a simplification of the results, for the purposes of an overview.

420 Ibid.
421 Law on the Office of the Public Prosecutor of the Lao PDR 2003, Article 3.
Article 2 of the Law sets out three types of petitions:

1. A “request” presented to a State administrative authority
2. A “claim” presented to an investigation organisation, the Office of the Public Prosecutor or the People’s Courts
3. A “petition for justice” presented to the National Assembly.

These terms are defined in Articles 16, 21 and 23 of the Law.

Article 4 states that “[a] citizen or organisation has the right to present a petition to the organisation that has the right and duty to protect the interests of the State [and] collectives or [such citizen’s or organisation’s] own rights and legitimate benefits that have been infringed or that are subject to conflicting claims by [another] individual or organisation.”

Article 6 states that petitions will be dealt with in “a timely manner;”424 “comprehensively, completely and objectively;”425 and the petitioner must be informed in writing of the outcome of their petition.426 If the petitioner is not satisfied, he or she may make a claim in court or present a petition for justice to the National Assembly.427

A petitioner is prohibited from:

- Presenting a petition without actual facts;
- Misusing a petition to defame another person, or to cause public disorder;
- Giving bribes to, making threats against, or suppressing the person who has the right and duty to deal with the petition.428

A person subject to a petition is prohibited from:

- Giving bribes to, making threats against, using force against, or suppressing the person who has the right and duty to deal with the petition [or] the petitioner;
- Concealing, hiding, or destroying information and evidence relating to the petition.429

Environmental Issues

Regarding environmental complaints, the Environmental Protection Law states that “[p]etition or complaint about any undertakings that cause negative impacts to the environment shall be sent to the local authority or the environmental management and monitoring unit of the area where the damage occurs, which shall consider the issue within 30 days from the date of receiving the complaint. Urgent issues shall be addressed immediately. When local authorities or responsible sectoral agencies cannot resolve the issues, they have to report the complaint to the next higher level in their chain of command or to the higher environment management and monitoring organisation within seven days. The responsible agency shall resolve the petition or complaint within 30 days, and shall notify the petitioner of the result.”430

The EIA Decree provides the following guidance:431

In case the dispute is between a project developer and a project developer, they should first enter into negotiation. If they cannot reach an agreement, they may take the matter to the Economic Dispute Arbitration Organisation to arbitrate. If they are not satisfied with the arbitration, they may file a lawsuit with a People Court of Lao PDR, unless the terms of their contract stipulate otherwise.

In case the dispute is between a project developer and the people are (will be) affected by an investment project:

424 Ibid., Clause 2 Article 6.
425 Ibid., Clause 3 Article 6.
426 Ibid., Clause 4 Article 6.
427 Ibid., Clause 6 Article 6.
428 Ibid., Article 31.
429 Ibid., Article 32.
430 Environmental Protection Law 1999, Article 25.
431 EIA Decree, Article 35.
The project developer must consider the complaint and solve the environmental disputes through transparent consultation/discussion and with compromise to each other. If a compromised agreement cannot be reached, the parties can request the environmental management and monitoring agency and local administrations, at each level, to resolve. If the environmental management and monitoring agency and the local administration fail to resolve the dispute, the parties may take the matters to a People Court to adjudicate, in compliance with the laws.

The project developer must listen to the complaint/petition and solve social disputes by following the Prime Minister’s Decree on Compensation and Resettlement of People Affected by Development Projects No. 192/PM, dated 7 July 2005 and Regulatory Provisions on Implementation of Decree on Compensation and Resettlement of People Affected by Development Projects No 1432/STEA, dated 11 November 2005, or other regulations which replace those regulations.

In case the dispute is between a project developer and a State organisation, a local administration or an international organisation, the dispute must be settled in compliance with the laws of Lao PDR or the conventions or treaties which Lao is a member party or a signatory (if any).

Land Conflicts

Land conflicts are of two types, administrative and civil. Administrative land cases are those about using land without authorization or in contradiction of its objectives and regulations. Civil cases relate to inheritance and transfer of land use rights.

Articles 78-82 of the Law on Investment Promotion regulate that in the case of a conflict related to investment, the involved parties should make all efforts to solve the conflict by consultation and mediation, to reach a mutually beneficial agreement. The NLMA is mandated by the Land Law to resolve disputes arising from administrative land cases. NLMA is also mandated by Decree 135/PM to review all state land leases or concessions for compliance with regulations.

Settlement of civil disputes will be brought to the village administration, and if not resolved, can be taken to the people’s court. Individuals or organisations that violate the laws will be fined or punished “depending on the gravity of the case,” and will include compensation for the losses caused. Individuals who have violated the laws including abuse of power, taking bribes and falsifying documents can be subject to criminal penalties, including compensation.

Where the State requisitions the land of an individual or organisation for public purposes, the State will pay “appropriate compensation” to the individual or organisation. A committee consisting of “representatives of concerned parties” will determine the value of the loss and decide compensation. Decree on State Land Lease or Concession, No. 135/PM, 2009, states that if compensation is required, the owner of the project must provide compensation to the land use holders.

Article 3 of Decree on the Compensation and Resettlement No. 192/PM 2005 defines compensation as “payment in cash or in kind for an asset to be acquired or affected by projects at replacement cost”. “Replacement cost” is the “amount in cash or in kind needed to replace lands, houses, infrastructure or assets on the lands…and other assets…affected by the development projects”. Compensation principles are further elucidated by Article 6 of 192/PM.

9.2. What barriers to access to remedy through these State-based grievance mechanisms have been reported?

Cultural factors affect the ways and means in which justice is sought by the people. A culture of deference to authority, acceptance of the status quo, values of non-confrontation and non-violence and respect of elders leads to reduced reliance of legal redress of
grievances. People usually resolve disputes outside the legal process, and minor offenses are mostly solved through mediation by local authorities. At the same time, changing livelihoods, breaking down of traditional social structures and altering economic realities are fuelling the demand for access to justice mechanisms.

There are very few lawyers practising in Lao PDR, and the status of lawyers is low in the country. Lawyers are not accorded the same status as other legal personnel in the court system. The situation is slowly changing, with increasing numbers of law graduates joining the Bar, however the lack of well-trained, professional legal advocates creates a serious barrier to justice.

Due to factors such as isolation and poverty, some ethic groups reportedly find it difficult to access information on their rights under State law. Some customary practises are at odds with State law and even with Lao’s international obligations.

Women are generally more disadvantaged in access to resources and services, as well as in seeking remedy to conflict. They are under-represented in decision-making processes. Children are also vulnerable, due to lack of knowledge of their rights, and a lack of basic education. Here again, girls are more prone to problems, as they have even less years of schooling than boys.

The UNDP survey also found that lack of legal awareness is the primary obstacle to accessing the justice system, and those who received education, were more likely to consider using the system.

Lack of enforcement of judgements was also a major concern. A cultural preference for non-confrontation also led to the favouring of semi-formal mechanisms like the naiban, a customary court. Women also prefer informal mechanisms to formal ones. Lack of legal aid and the poverty of the respondents, as well as the distance from rural areas to legal mechanisms were other significant barriers to access. To solve this problem, creation of mobile courts could help.

The UNDP Baseline Study on corruption found that the judiciary is politicised and lacking independence, and the corruption within the judiciary further spreads the “culture of impunity” and erodes trust in the system, which can form a significant barrier to justice as well as the perception of justice. At the same time, the judiciary is understaffed and lacking in the technical skills necessary to fight corruption. Few corruption cases are brought to the courts, and those that are involve lower ranking officials.

9.3. Are there laws, regulations, policies and/or initiatives requiring or encouraging the establishment of non-State-based grievance mechanisms?

Not to our knowledge.

10. Is the State giving the country’s National Human Rights Institution powers to enable it to contribute to the area of business and human rights?

Lao PDR does not have an NHRI.

452 Ibid., 38.
It has been stated that Lao lacks an effective mechanism for receiving complaints, especially from women from ethnic minorities. The CEDAW report calls for Lao to establish a national human rights institution in accordance with the Paris Principles. The report states that the institution should be given a broad mandate on human rights, as well adequate financial, technical and human resources to function effectively. Further, the State should collect statistics on the number of complaints filed, types of complaints and their outcomes.

11. **What are the efforts that are being made by non-State actors to foster State engagement with the Framework and the Guiding Principles?**

On 16-18 September 2011, Earth Rights International (ERI) hosted the fourth meeting of the Mekong Legal Network (MLN) in Chiang Mai, Thailand. The MLN is an independent group of experienced Mekong region legal professionals and civil society leaders from Burma, Cambodia, China, Lao PDR, Thailand, and Vietnam. MLN works to promote the rule of law in the Mekong and ASEAN regions, especially in relation to regional and cross-border development issues. They have studied the impact of the controversial hydropower projects in Laos, especially the environmental and social consequences.

The MLN discussed how to ensure current national, regional and international legal frameworks are utilized to ensure that planning decisions adequately consider the impacts of the projects and allow for greater public participation, as well as legal strategies to help ensure the 1995 Mekong Agreement governing the lower Mekong Basin is implemented.

During the meeting, MLN representatives discussed CSR and human rights in ASEAN with reference to the Guiding Principles on Business and Human Rights. The MLN is also conducting a research study on CSR and human rights in ASEAN to complement a similar study to be conducted by the ASEAN Intergovernmental Commission on Human Rights (AICHR).
